

About Your CT Scan

The providers at Collin County Ear Nose and Throat offer an in-office CT scanner for your convenience. Common tests that we would order include screening sinus CT scans, in-depth CT scans done in preparation for sinus surgery, facial CT scans to help in fitting dental appliances for snoring and chronic facial pain, and temporal bone CT scans to evaluate the inner ear.

None of these scans in our office require intravenous contrast (IV).

The CT scans are performed on **Mondays** in our **Frisco** office at 8380 Warren Parkway, Suite 504, Frisco TX 75034, (972) 596-4005.

Also for your convenience, appointments are usually scheduled in 20 minute time slots, so you should not have much waiting time before and after your scan.

There are no diet restrictions before or after your scan.

There is no sedation used during the procedure, so you may drive yourself to and from your appointment.

You will check-in at our reception counter before your scan is done. You may be charged an office co-pay or a payment towards your deductible at the time of the service. **This depends on how you and your employer have structured your health insurance.** We will make every effort to obtain benefit information for you when scheduling your appointment, but you must come prepared to make a payment accordingly, just as you would when visiting the providers or going to the hospital for surgery.

Please contact your individual provider or the insurance department with any further questions.
